

Lake Anna HAB Status Report – Advisory Update for North Anna Branch; Pamunkey Branch; Terry’s Run Branch

Issued: Friday 9/27/2024

Next Issue: on or about the week of 10/21/24

HELPFUL TIP:

Visit www.SwimHealthyVA.com and click on the Harmful Algae Bloom Map to review sample results near you!

Expand the map using the symbol in the upper right hand map title bar, then click on the magnifying glass. You can search by location name or address.

-  Harmful algal (cyanobacteria) concentrations at unsafe levels
-  Algal concentrations at acceptable levels
-  Lake area of HAB swimming advisory

Monitoring at 7 sites in Lake Anna above Rt. 208 occurred on 9/18/24. 2 sites on the Pamunkey Branch and 1 on Terry’s Run indicated a cyanobacteria bloom with cell concentrations at unsafe levels. The 2 sites in the North Anna Branch, 1 site in the Pamunkey and Lake Anna State Park site contained acceptable cell concentrations. All cyanotoxin results were below detectable levels. Swimming advisories remain in place until two samples at least 10 days apart, indicate both cyanobacteria counts and cyanotoxin are below guidance levels. **No changes to the current advisories are recommended.** The HAB map and this status report have been updated and are posted at www.SwimHealthyVA.com.

People & pets should avoid swimming in the “red” areas of the map.

When in doubt, stay out!
