

Identifying Health Disparities: 2024 Community Health Assessment

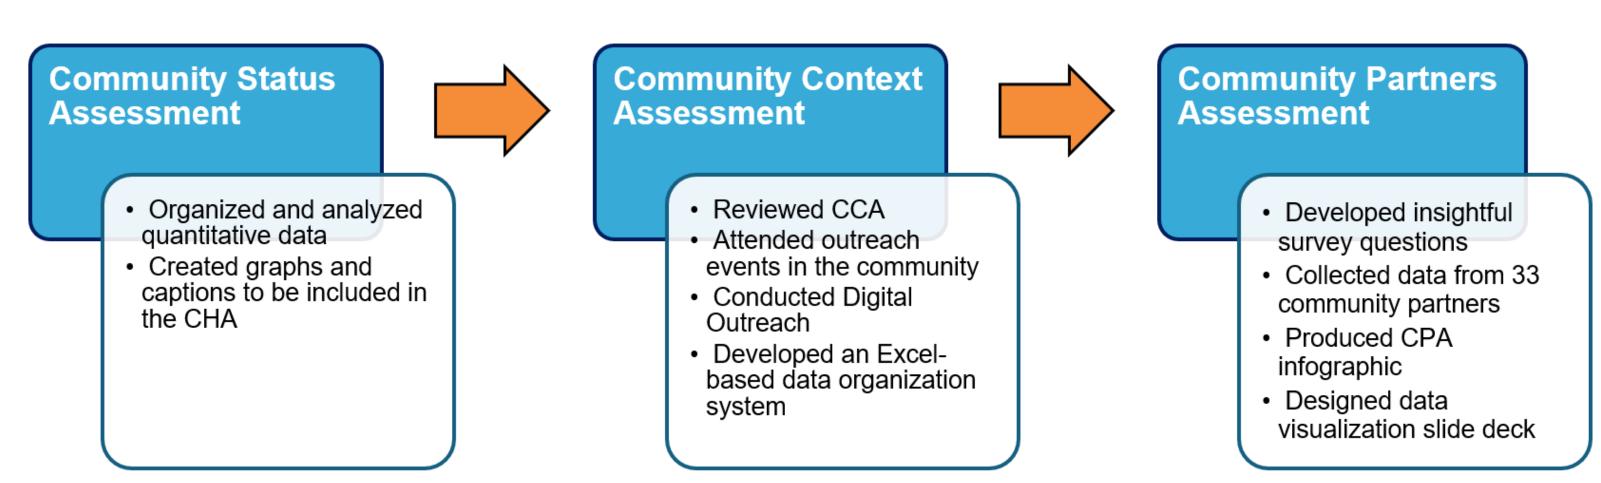

Haasita Akkala

B.A. Biology | CWRU 2025 Cohort 2, Population Health Team

PROJECT OVERVIEW

- As part of a 15-month process, the CHA is a comprehensive research project aiming to identify health disparities and opportunites for programming in the community. At the conclusion, a report is published, sharing information back to the residents.
- The 2024 RHHD CHA is crucial as it is the first assessment conducted after Richmond City and Henrico county merged into a single district in 2018. Though typically conducted every three years, the CHA was postponed due to the pandemic, resulting in a delay of the most recent assessment.
- Utilizing the MAPP 2.0 framework, we conduct the CHA to identify 5 significant health issues in the district to focus the next cycle's Community Health Improvement Plan (CHIP).
- The CHA comprised of 3 separate assessments to which I contributed.

OUTCOMES

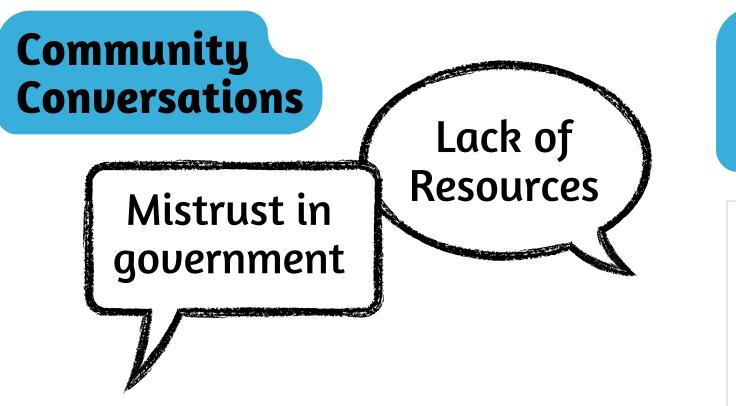

Access to
Mental Health

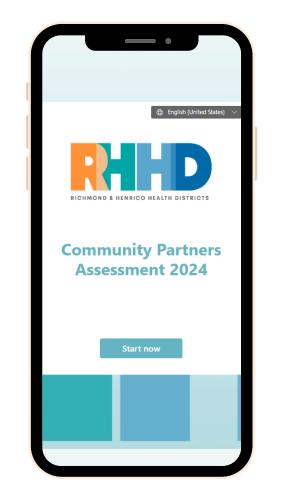

*The data collection period is still ongoing and the results are changing everyday. This is a snapshot at what we are seeing right now!

Distinct disparities between the City and County

of residents Tabled at various

OUTPUTS

Data Presentation

• Synthesized quantitative data into an interactive slide deck to present to all RHHD staff

RICHMOND & HENRICO HEALTH DISTRICTS

EXPERIENCES

Engaging with the local community allowed me to directly connect with the individuals we are trying to help through the events we planned or were invited to!

HEAV Homeschool Convention

As an aspiring physician, seeing clinical work in the community was very exciting! These experiences reaffirmed the importance of collaboration between medicine and public health in order to promote overall wellbeing for the residents of our district.

Immunization and Physicals Clinic

Diverging from my main project, I was able to have various other experiences which gave me exposure to other aspects of public health and the agency overall!

City Council Meeting

Annual All Staffi Meeting

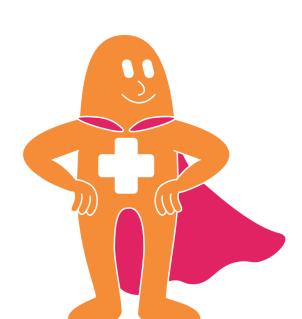

CHALLENGES

Survey Fatigue in the Community

Low Target Groups participation

Limited Time for data collection

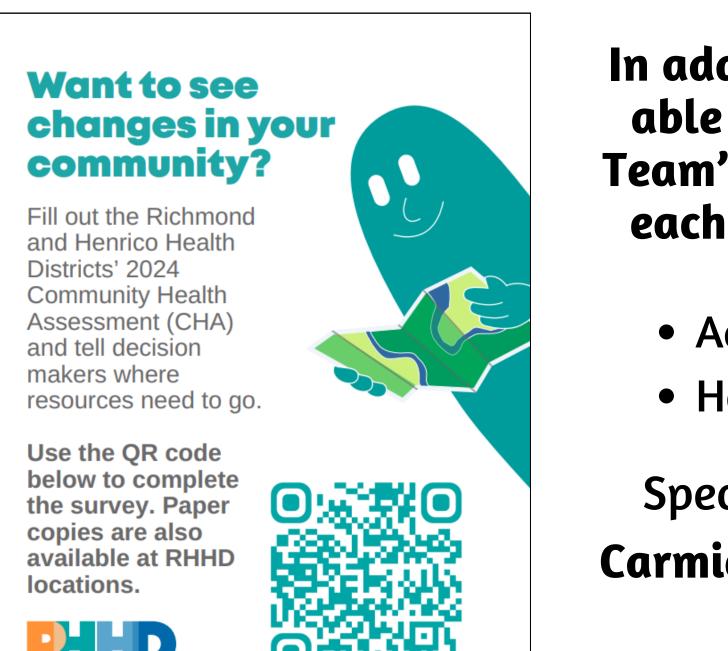

Lack of Manpower

LESSONS LEARNED

- Improving health goes beyond the clinical setting!
 - Only 20% healthcare is about going to the doctor. The remaining 80% is reliant on social determinants of health. Even within the same district, residents' health experiences may vary dramatically. Public health should be centered around equity to ensure that no community is left behind.
- The importance of outreach
 - Mistrust in the government and the lack of knowledge on available resources were 2 of the most common points of feedback from community members we spoke to. Meeting residents where they are builds trust and allows for information to be shared directly with them.
- Establish values
 - In discussing the district's COVID-19 response with nurse manager Amy Popovich, she shared that best way to approach a large project is to establish values. This allows for a framework of checks and balances to ensure that extraneous factors do not risk the integrity of the project.

THANK YOU!

In addition to all this great work, I have been able to contribute to the Population Health Team's other ongoing projects as well. I thank each team for welcoming and including me.

- Adolescent Health
- Opioid Outreach Team
- Health Equity
- Violence Prevention

Special thanks to **Tamara Jone**s and **Jasmine** Carmichael for their mentorship. Jeff Stover and

Bridget Cochran for giving me these opportunities through the Internship Academy!
