

HPV Vaccination

About Our Services

Prince William Health District

Screening

Detection

Treatment

Education

Services are provided confidentially and are low to no cost. You are encouraged to speak with a parent or trusted adult.

Own Your Health

A vaccine is available to prevent infection with types of human papillomavirus (HPV) known to cause certain cancers later in life. The **HPV vaccine is:**

- Safe
- Effective
- Can help avoid HPV related health problems like genital warts and some cancers.

Who should get the HPV vaccine ?

All children **ages 11 to 12**, but the vaccine can start at age 9.

Everyone through age 26 years, if not vaccinated already.

*Adults **age 27 through 45 years** who are not already vaccinated may decide to get the HPV vaccine after speaking with their doctor about their risk for benefits of vaccination for them.

Protect Yourself & Your Partner from Sexually Transmitted Infections (STIs)

Did You Know?

Practice Abstinence

The only way to avoid getting a STI is by not having any sexual contact.

Use Condoms

Using a condom the right way every time you have sex can help you lower your risk of all STIs.

Talk With Your Partner(s)

Talk openly and honestly before having sex. Not sure how? Visit [Start the Conversation at bit.ly/STI-Conversation-Starters](https://bit.ly/STI-Conversation-Starters) for tips!

Why risk not knowing?

Let's both get tested together!

Get Tested

You can't tell if someone has an STI just by looking at them. Most STIs do not have symptoms, but they can still cause health problems.

gettested.cdc.gov

If you have concerns, **speak to a health care professional.**

Since 2018 in the U.S:

-  Cases of Gonorrhea have increased **11%**.
-  Cases of Syphilis have increased **80%**.
-  Cases of Syphilis among newborns have increased **183%**.

Source: [CDC 2022 STI Surveillance Report](#)

In 2023, early syphilis cases have **increased 22%** in Virginia.

CDC estimates:

Almost **half** of all new infections in 2018 were among youth aged 15-24.

About one in five people in the U.S. – had an STI on any given day.

What are the types of STIs?

- Chlamydia
- Gonorrhea (GC)
- Syphilis
- Hepatitis
- Herpes
- HIV/AIDS
- Human Papillomavirus (HPV)
- Mycoplasma genitalium (Mgen)
- Trichomoniasis

What happens if I test positive?

- Having an STI can feel scary, but it is **not the end of the world!**
- **MOST STIs are curable, and ALL are treatable.**
- If you or your partner is infected with an STI that can be cured, both of you need to start treatment soon to avoid re-infection.
- Your healthcare provider can talk with you about which medications are right for you.
